Payroll

Business Value

When it comes to payroll, accuracy and security are of the greatest importance. This module is a robust and highly configurable payroll management solution which enables recording of all details on employee working hours, statutory reports and essential information for your organisation.

The module is compatible with all major payroll software and is capable of generating the necessary data needed for the creation of pay slips. You can view payroll related reports, handle increments, and process multi-currency transactions. The system has been designed to capture attendance and absence related data for payment processing such as overtime pay and attendance based incentives. It is highly configurable which allows the users to define various transactions as per the company policies.

Advantages

- Multi-currency, multi-company and multi-pay frequencies which can be helpful for operating across different countries.

- Capable of processing data needed for the creation of payroll for an organisation-wide employee count, with efficiency and accuracy.

- Error free, expert accuracy and precision when concerning calculation of multiple payroll transactions.

- Configurable to a specific country and highly compatible

- Easy compatibility with any type of existing financial system.

- Allows easy processing of increments and/or decrements for any employee depending on the employee's performance and other considerations such as attendance etc.

Key Features

- Ability to organise employees into logical pay groups without restrictions.

- A better way to view manage and analyse your payroll costs

- Facilitates uploading of data to excel sheets giving users the capability to use the system irrespective of the location where the payroll is processing (i.e. if the company has different branches-local or foreign).
